

## **Transit Mixers**

Conmix, the well-known name for concrete Transit Mixer is a strong well designed piece of equipments meant for transporting concrete from plant directly to the place where it is to be poured.

Conmix is a hydrostatic Transit Mixer mounted on truck chassis in different capacities like 3,4 and 6 cum. Hydrostatic power is transmitted by a high pressure axial piston type pump and motor (Rexroth / Sauer Sundstrand German make) which permits infinite varying drum speed from 0 to 14 rpm in both directions. The pump gives flow to a high pressure hydraulic motor which rotates the mixer drum through a planetary gear box (ZF / Sauer Sundstrand German make).

A specially developed Transit Mixer which can be mounted on 142" wheel base chassis with high drum speed and speedy discharge arrangement.
